

"We accomplish the difficult in a day, and the impossible in three."

SPLICING

Fiber Optic Splicing is a difficult project in that our engineers must fuse together multiple fibers so that the light that passes through the fibers is not scattered or reflected backward by the splice. This requires the knowledge and experience of our selective engineering staff.

Ultimately, we create such a clean fusion that our splices are most often as strong as the fiber itself. *We stand by our work, **always.***
